## ABSTRACT

**Introduction :** Seeing the spread of Covid-19 that has not improved will certainly have an impact on public anxiety. Especially for pregnant women, babies and toddlers who are vulnerable to corona virus transmission, they will be anxious to make visits to health service facilities, especially at the Midwife's Independent Practice. This of course will greatly affect the number of visits to Maternal and Child Health services at the Midwife's Independent Practice.

**Research purposes :** Find out the impact of the Covid-19 pandemic on the number of visits to maternal and child health services at the Midwifery Independent Practice in Pontianak City.

**Research methods :** This research uses descriptive research method. The research subject is the owner of the Midwife Independent Practice in Pontianak City.

**Research result :** Of the four indicators antenatal care, intranatal care, postnatal care, and immunization for infants and toddlers, there are several independent midwife practices that experience changes in the number of visits, either increasing or decreasing.

**Conclusions :** Based on research conducted in 11 Independent Midwives Practices in Pontianak City, it can be concluded that the Covid-19 pandemic has had a significant impact on the number of visits to Maternal and Child Health services at the Midwives Independent Practices in Pontianak City.
